SUMMARY

Frontend Developer focused on building **responsive**, **accessible**, and **high-performance** web applications with **clean, maintainable, and scalable code**…..

TECHNICAL SKILLS

Frontend: HTML, Css, JavaScript, React, Tailwind, Material Ui, Framer Motion, Redux, React Router, Axios, Tanstack Query
Other Skills: Figma, AI, VS Code, Git, GitHub

PROJECTS

◆ **My Portfolio | [Live Demo](#)**   **Jun 2025**
(Front-end Developer and UI Designer)   ***Duration:*** *28 Days*
Tech Stack: React, Tailwind CSS, Framer Motion, Context API, Email Js, AI

- **Designed and built a fully custom, animation-rich portfolio** to leave a strong first impression — with **scroll effects, hover reveals, and motion that reacts to user movement.**
- Features **custom theme controls**: light/dark toggle + custom color, so visitors can personalize their experience.
- **I used AI tools only to improve the clarity of my own written content,** while every section — from layout to transitions — was **crafted from scratch.**

◆ **ShopEase E-Commerce | [Live Demo](#)**   **May 2025**
(Front-end Developer and UI Designer)   ***Duration:*** *44 Days*
Tech Stack: React, JavaScript, Redux Toolkit, Tailwind CSS, Material UI, TanStack Query, Axios, React Router, React Toastify, React Slick

- **Planned, designed, and developed a high-performance eCommerce frontend from scratch**, merging UI/UX best practices with **scalable React + Redux Toolkit** architecture and **zero-backend** dependencies.
- Engineered advanced **product discovery with debounced search** (300ms delay), **multi-dimensional filtering** (price, rating, stock, brand), and tabbed navigation—**reducing product-find time by 30%**.
- **Delivered a seamless buying flow with a 4-step checkout**, real-time cart/wishlist sync, and dynamic order statuses—streamlining the purchase experience and improving usability.
- Achieved **90+ Lighthouse scores**, **<1s load times**, and **40% fewer API calls** through **performance optimization** with **Tailwind CSS**, **Material UI**, and **TanStack Query caching.**

◆ **Click Task – Employee Task Management App | [Live Demo](#)**   **April 2025**
(Front-end Developer and UI Designer)   ***Duration:*** *20 Days*
Tech Stack: React, JavaScript, Tailwind CSS, *Context APi,* React Toastify

- **Designed and developed** a fully responsive frontend-only task management app with custom UI, **role-based login**, and **light/dark mode toggle** using Tailwind CSS.
- Built a demo login system with **pre-filled credentials and developed two dashboards**:
  - → **Admin**: assign tasks, add employees, filter/paginate task lists, status-based UI.
  - → **Employee**: interactive task cards, status updates (accept/complete), and overdue alerts.
- Managed app-wide state using **Context API** (no Redux), enabling **real-time UI updates** across components and consistent logic flow.
- Integrated React Toastify notifications throughout the app for real-time feedback on task assignments, completions, and employee actions.

EDUCATION

Multiple Resources: Online Courses & Self-Study   **2024 – Still Learning**
- *Front-End Development Specialization*   *Online* Resource

Amity University   **2021 – 2024**
- *Bachelor of Computer Applications (BCA)*   *Noida, UP*
